Figma For Tableau

8 HOURS

Deckel Mualem

Figma for Tableau is a unique course designed specifically for BI professionals, analysts, dashboard developers, and anyone looking to elevate their data visualization and design capabilities to the next level.

Figma is an advanced, intuitive, and accessible design tool that enables you to quickly build dashboard wireframes, share ideas with your team, and make changes easily—even before starting work in Tableau.

During the course, you will learn:

- How to create interactive models, leverage component libraries and ready-made design templates, and maintain a consistent visual language.
- How to connect Figma with Tableau and build an integrated workflow that shortens timelines, streamlines team coordination, and ensures an accurate and impressive final result.
- Practical tools for data visualization, enhancing user experience, and presenting information in a way that delivers real value to the organization.

This course is ideal for anyone who wants to lead innovative BI processes, improve collaboration between designers, analysts, and developers, and transform every dashboard into an unforgettable visual experience.

Syllabus

Introduction and Familiarization with Figma:

Tool structure, user interface, cloud-based work, and collaboration

Work Fundamentals: Frames, Components, and Styles

Building frames, creating reusable components, defining styles (text, colors, grid)

Building Layouts for Dashboards

Using existing templates, working with Auto-Layout, creating an internal library for team use

First Exercise – Basic Dashboard

Teamwork, visual representation of data, implementing business requirements

Advanced Work with Interactive Components

Creating an interactive interface, saving work time, simulating information flows

Guided Exercise – Complete Dashboard

Individual/group work on a small project: designing a full dashboard according to a business brief

Integration with Tableau

Overview of connection plugins, using the Tableau UI Kit, importing designs into Tableau, and demonstrating workflow

Elevate your team to new heights
